packet: E1-04 #9

Closed #7

torbenanderson opened last week · edited by torbenanderson Edits Owner

Backlog ID: E1-04
Use Case: CI pipeline
Description: GitHub Actions: macOS runner (full tests incl. enclave) + Linux runner (vault/crypto/DID/CLI tests only; enclave code excluded via `#[cfg]`). Build, test, lint on push.
Spec path: docs/plan/spec/PKT-E1-04-work-item.md

Objective

- Deliver E1-04 (CI pipeline).
- Implement backlog contract exactly as documented.

Scope

In scope:

- GitHub Actions: macOS runner (full tests incl. enclave) + Linux runner (vault/crypto/DID/CLI tests only; enclave code excluded via `#[cfg]`). Build, test, lint on push.
  Out of scope:
- Other backlog items outside E1-04

Acceptance Criteria

- AC1: E1-04 behavior matches backlog description: GitHub Actions: macOS runner (full tests incl. enclave) + Linux runner (vault/crypto/DID/CLI tests only; enclave code excluded via `#[cfg]`). Build, test, lint on push.
- AC2: CLI output/errors are deterministic and user-safe.
- AC3: mapped tests cover happy path and failure path.

Tests Mapped

- T-E1-04

ADR required?: no
ADR link: n/a

Docs impact listed

- docs/plan/spec/PKT-E1-04-work-item.md
- docs/plan/TESTING.md (if test mappings are added/changed)
- docs/architecture/decisions/ADR-*.md (if ADR required)
- docs/README.md (if user-facing behavior changed)

Definition Of Loaded (Required For ready-to-execute)

- [x] Backlog mapped
- [x] Spec linked
- [x] Tests mapped
- [x] ADR triaged
- [x] Docs impact listed

Execution Plan (Required Before Coding)

Commit split plan:

- commit 1: core implementation for E1-04
- commit 2: tests and docs alignment updates
  Planned validation commands:
- cargo fmt --check
- cargo clippy -- -D warnings
- cargo test
  Risk notes:
- mitigation: run mapped tests before closeout and update spec if contract changes

Closeout Evidence (Required For done)

PR link: #7
Tests run (commands + result): see latest Closeout Evidence comment
Docs updated (paths): see latest Closeout Evidence comment
Files added/changed (paths): see latest Closeout Evidence comment

Spec update note (E1-04)

Updated `docs/plan/spec/PKT-E1-04-work-item.md` with the following **included** items:

- Security audit in CI via `cargo audit`
- Dependency update automation for Rust + GitHub Actions
- Dependabot cadence/behavior: weekly, batch minor/patch updates
- Coverage trend signal via `cargo llvm-cov` (non-blocking in initial pass)

Intentionally **not included** in this spec (parked elsewhere):

- Conventional PR/commit guard
- Release workflow (`v*` tags, release artifacts/checksums)
- Docs link checker

These parked items remain tracked in your planning artifacts as noted.

torbenanderson last week Owner Author

Spec refinement update (E1-04)

Applied the additional CI policy refinements to `docs/plan/spec/PKT-E1-04-work-item.md` :

- Explicit trigger matrix:
  - push + pull_request: merge-blocking build/test/fmt/clippy
  - pull_request only: optional metadata checks (non-blocking)
  - schedule (daily/weekly): `cargo audit`
- Explicit runner boundaries for macOS vs Linux (`#[cfg(target_os = "macos")]` behavior)
- Dependabot selected as the dependency updater (weekly; batched minor/patch)
- Artifact/log expectations added (including coverage summary) with explicit retention guidance
- `cargo llvm-cov` remains non-blocking trend signal in this initial pass

This keeps E1-04 implementation scope explicit while parked items stay out of spec as requested.

torbenanderson last week Owner Author

Spec clarification: scheduled security audit cadence is now explicitly **weekly** (not daily/weekly).

torbenanderson added ready-to-execute and removed ready-for-review last week

Execution Plan

Scope sentence: Implement E1-04 CI pipeline core gates on macOS/Linux and add non-blocking enhancement jobs/config (weekly audit, Dependabot batching, coverage trend, optional PR metadata checks) with explicit trigger boundaries.

Commit split plan:

1. `ci(core): enforce merge-blocking rust checks on push/pr`
   - Update `.github/workflows/ci.yml` for explicit trigger/job boundaries and stable job naming.
2. `ci(enhancements): add scheduled audit, metadata check, coverage trend, and dependabot`
   - Add/modify workflow entries for weekly `cargo audit`, PR metadata checks (non-blocking), and non-blocking `llvm-cov` summary artifact.

- Add `.github/dependabot.yml` with weekly grouped minor/patch updates for Cargo and GitHub Actions.

3. `docs(plan): sync CI process references with implementation`
   - Update planning/docs paths only if implementation details require drift correction.

Validation plan:

- Local: `cargo check`, `cargo fmt --check`, `cargo clippy -- -D warnings`, `cargo test`
- Workflow sanity: YAML lint via GitHub parser on push/PR.

Post-closeout fix note:

Follow-up fixes were applied after initial closeout to address CI runtime behavior on `pkt/e1`:

- Fixed macOS CI shell compatibility in `.github/workflows/ci.yml`
  - Replaced `|& tee` with portable `2>&1 | tee` in Rust check/test steps.
- Adjusted PR metadata enhancement signal in `.github/workflows/ci-enhancements.yml`
  - Changed metadata check output from `core.setFailed(...)` to `core.warning(...)` to keep it informational/non-blocking.

Commit:

- `762d944` (`ci: fix macOS bash piping and soften pr metadata signal`)

Result:

- CI + CI Enhancements are green for both `push` and `pull_request` on `pkt/e1`.

torbenanderson last week Owner Author

Follow-up (post-close, out-of-original-scope for E1-04): we added a Linux CI mutation-testing gate using cargo-mutants in .github/workflows/ci.yml, configured on every push and pull_request. This specifically covers Linux-compiled paths like enclave_stub and catches surviving mutants there. The local packet spec was updated to reflect this scope addition: docs/plan/spec/PKT-E1-04-work-item.md.

torbenanderson last week Owner Author

Follow-up tweak: weekly jobs are now aligned to run at the same time. Mutation testing runs in a separate workflow (`.github/workflows/mutation-testing.yml`) and both it plus security audit use `cron: "0 1 * * 6"` (Saturday 01:00 UTC), which maps to Friday 5:00 PM Pacific during PST (6:00 PM during PDT). Also updated docs in `docs/plan/CI.md` and the E1-04 spec to reflect this cadence and separation from push/PR merge gates.
